Saartha

Run your Business on Maps

Saartha is an enterprise software development company with presence in India and Australia. Industry leaders like SAP and Esri recognize it as an "Emerging Business Partner" to build innovative, and user-friendly enterprise applications.

Saartha is poised for growth with portfolio of products –Business on Maps, Asset Planning, and Evolve Business Rules. It has an impeccable record of delivering solutions in real estate operations, mine planning, the list goes on.

What Saartha envisioned

Saartha wanted to bring location intelligence into SAP solution set to help customers benefit from it. Saartha was looking for an enterprise grade GIS solution to integrate with SAP. Saartha wanted to take user experience with maps beyond visualisation and analytics. The vision was to enable organi-

sations to run integrated business operations on maps. The system should also be able to analyse any SAP operational report on map, in real time, without the need to extract, transform and load into GIS systems or other analytic tools.

CRM and SCM systems of SAP with ease. 'Business on Maps' delivers an incredible, next gen user experience, with maps. It is a low code platform, which empowers businesses to geo-enable any SAP transaction by way of configuration. Any business operation can be enabled to run on maps. Furthermore, there are several out of box standard apps like spatial job scheduler and asset maintenance apps that readily deliver RoI in as early as 13th week onwards, for a typical implementation.

Geo-Tag Assets on Map

Schedule Jobs on Map

Optimize Route Save Travel time

Monitor Asset Operations on Map

Analyze Asset Operations on Map

niche technology areas of GIS Integration, SAP BRF+, S/4, HANA, SAP Fiori/UI5 across diverse industry verticals.

Location Intelligence for SAP solutions

There is a tremendous opportunity for enterprise customers using SAP, to leverage location data in their business operations. As an example, for organisations with large plants or geographically distributed assets, job scheduling considering location is a huge challenge. There are many scenarios, like creating tailored marketing campaigns by location, based on customer demography,

Esri India joins in

Being a leader in enterprise GIS systems, Esri was the solution of choice for Saartha to realise their product vision. 'Business on Maps' is a product by Saartha that integrates Esri's proven GIS solution with SAP solutions. Thanks to this collaboration, organisations can implement location intelligence in their ERP,

Benefits of the system

Apps like spatial job scheduler enable organisations to save millions in proactively planning their preventive asset maintenance scheduling. Reduced travel time, increased productivity of field crew, eliminating overdue preventive maintenance, increased asset uptime, savings in capital expenditure and operational expenditure are the major benefits in asset management space. In addition to asset management, location intelligence can be implemented in several, business functions. 'Business on Maps' helps unlock more value from SAP investments. ●
