Plague in Bombay Island, 1897–1898

In 1897, Bombay municipal administration declared the plague an epidemic. This map shows the spatio-temporal spread of plague across Bombay Island. The circles inside the map show cases recorded through house-to-house surveys, while the bar chart shows the distribution of cases across different localities. In total, 14,800 cases were reported, with a fatality rate of approximately 91.9%.
